Press release - UCI rejects allegations made by Tyler Hamilton

23.05.2011

The International Cycling Union categorically rejects the allegations made by Mr Tyler Hamilton, who claims that Lance Armstrong tested positive for EPO during the 2001 Tour of Switzerland and had the results covered up after one of his representatives approached the Lausanne laboratory responsible for analysing test results from the event.

The UCI is deeply shocked by the seriousness of the allegations made on the “60 Minutes” programme aired by US television network CBS, and by the extent of the media interest in the case, and wishes to state once again that it has never altered or hidden the results of a positive test.

The allegations of Mr Tyler Hamilton are completely unfounded. The UCI can only express its indignation at this latest attempt to damage the image of cycling by a cyclist who has not hesitated to abuse the trust of all followers of cycling on several occasions in the past. At no time did he see fit to inform the UCI of the events he claims to have witnessed ten years ago, and which he is now using in his attempt to harm the UCI.

The UCI can only confirm that Lance Armstrong has never been notified of a positive test result by any anti-doping laboratory.

Aside from the fact that no legal action may now be taken in respect of events that occurred in 2001, the UCI also wishes to point out that in doping cases it must abide by the rules of evidence; any statutory or scientific evaluation must necessarily be made on the basis of the rules, knowledge and detection methods available at the time.

Once again, the UCI wishes to state that no manipulation or cover-up has occurred in respect of its anti-doping procedures. The UCI will continue to defend its honour and credibility by all means available, and reserves the right to take any measures it deems necessary against Mr Hamilton or any other person.

The UCI confidently awaits the results of the inquiry being conducted by the US justice system. It hopes that the investigations may be concluded swiftly and the truth ascertained, so that the sport of cycling may be spared further unnecessary damage.
