ANTIDOPING COMMISSION

Mr. Kevin LIVINGSTON  
[REDACTED]  
[REDACTED]

U.S.A.

Lausanne, 23<sup>rd</sup> October 1997

*2-4 mg/ml*

Dear Mr. Livingston,

Following your drug test at the race "Tour de l'Avenir" on 11<sup>th</sup> September 1997 (7<sup>th</sup> stage), the analysis report of the Paris Laboratory has shown the presence of Nandrolone metabolites (19-Norandrosterone and 19-Noretioebolanolone).

Although we decided that the concentration (around 2 ng/ml) is low enough to not declare this case positive, we hereby would like to warn you for the future. In fact, should this concentration exceed 2 ng/ml, we will be obliged to ask your National Federation to open a procedure, according to the UCI Antidoping Examination Regulations.

Kindly asking you to take due note of the above, we remain,

Yours sincerely,

For the Antidoping Commission

*[Signature]*  
Anne-Laure Masson  
Medical and Antidoping Coordinator
